Safety Notice.

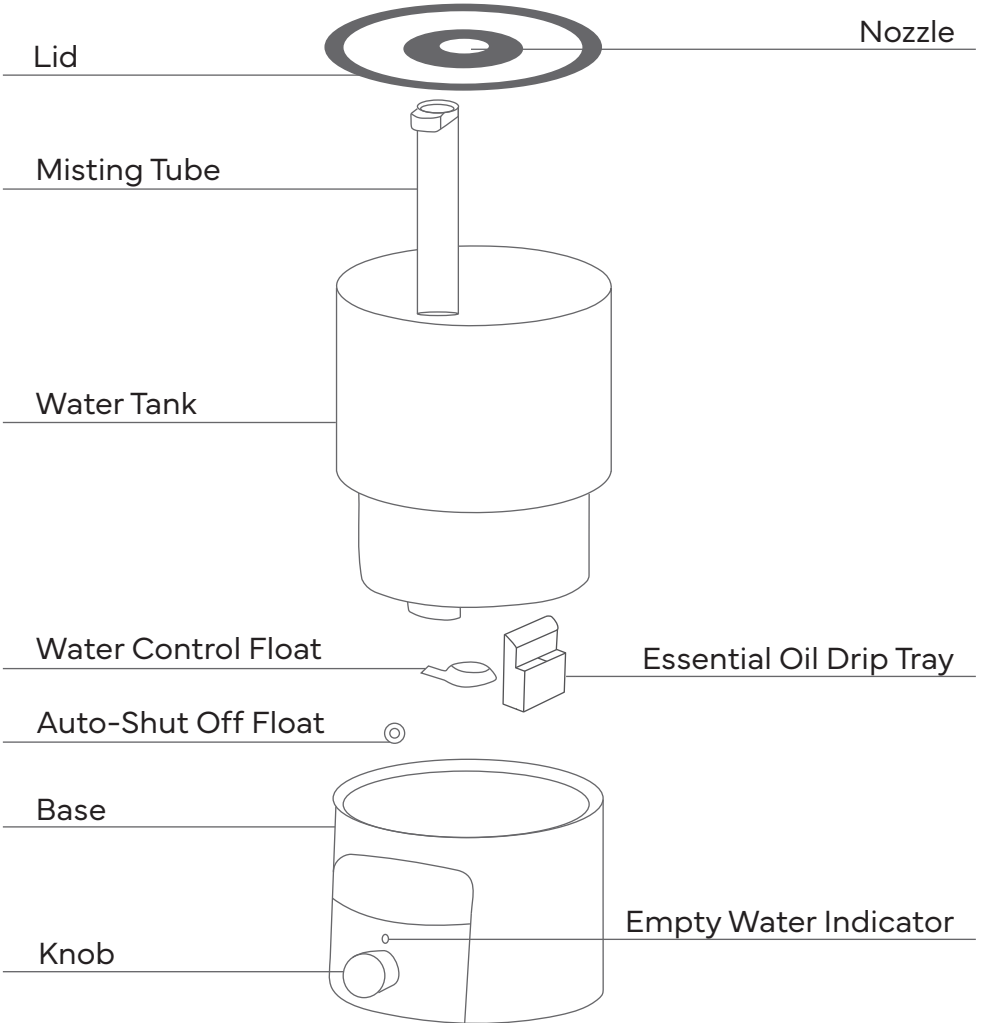

1. Do not attempt to service the humidifier other than cleaning the product.
2. Only operate the humidifier at 120V/60Hz.
3. Unplug the power cord from the outlet when the humidifier is not in use or when cleaning and refilling the product.
4. Keep all foreign objects, fingers, hair, loose clothing, jewelry, etc., away from openings.
5. Do not alter or damage the plug.
6. Use only as described in this manual.
7. Do not place the cord near or on any heated surface.
8. Never operate the humidifier if the plug or cord is or appears to be damaged.
9. Never use the power cord to pick up, carry, drag, pull, or lift the air purifier. Do not pull the cord around sharp corners or surfaces.
10. When removing the plug from its outlet, hold onto the plug and pull gently. Do not pull from the cord.
11. Never run the humidifier unless it is fully assembled.
12. Do not drop any items into the humidifier.
13. Do not touch the bottom of the humidifier or its plug when your hands are wet.
14. Only operate with distilled or filtered water to prevent scale build-up.
15. Do not use the humidifier outdoors.
16. Only use in an upright position. Do not place anything on top of the humidifier.
17. Always turn off the humidifier before unplugging the humidifier from the outlet.
18. Only place essential oils in the essential oil drip tray.
19. Place humidifier on a flat, stable, and strong surface.
20. To reduce the risk of fire or electric shock do not modify the humidifier in any way.
21. Do not pour water down the misting tube.
22. Do not touch the atomizing sheet.
23. Do not use benzene, thinner, or other solvents to clean the humidifier.
24. Do not separate the water tank from the base during use.
25. Do not unplug the humidifier with wet hands.

NOTE: REMOVE PACKAGING AND INSERT FROM THE BASE OF THE HUMIDIFIER PRIOR TO OPERATION.

Relief

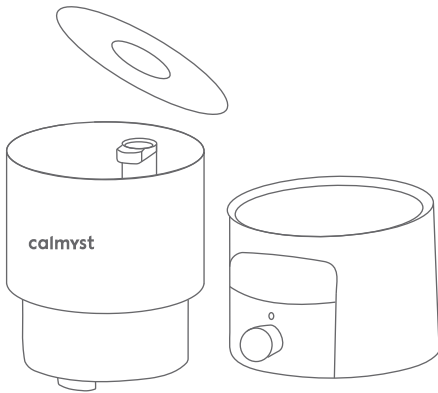

Remove Packaging Before Use.

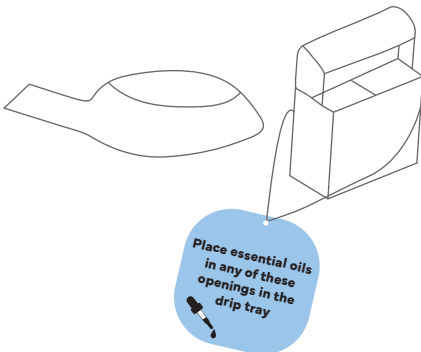

Always make sure the humidifier is unplugged and turned off when maintaining the humidifier.

Never operate with foreign objects present inside the humidifier.

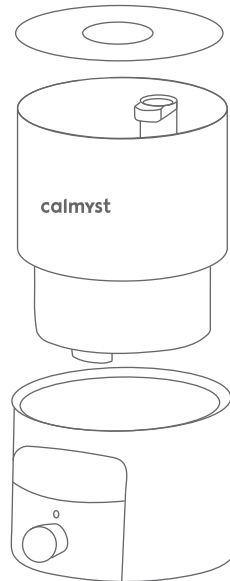

- 1 Remove the lid and water tank from the base of the humidifier.

- 2 Remove the foam packaging and essential oil insert from the base of the humidifier.

- 3 Ensure both floats are back in place and reassemble the humidifier.

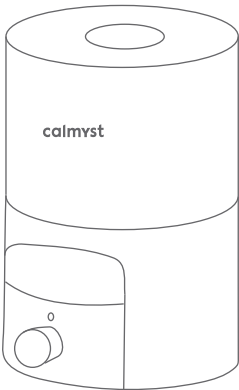

07

Proper Placement of the Water Tank.

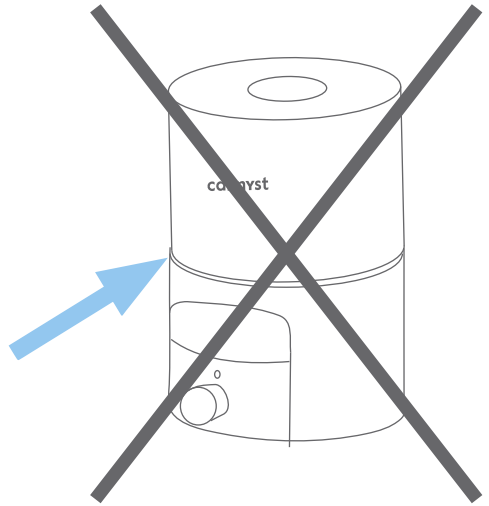

Always ensure there are NO gaps between the water tank and the base.

If they are not flush the humidifier will not operate correctly.

- 1 The water tank is properly set into its base. There are no gaps or spaces between the water tank and base.

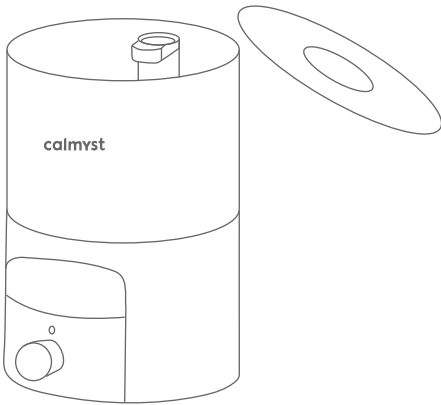

- 2 Gaps like the one seen here will prevent the humidifier from operating normally.

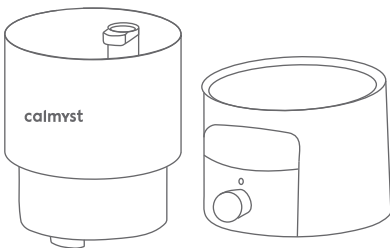

Filling up the Humidifier.

Use distilled or filtered water to prevent mineral build up, white dust, and stress on the humidifier caused by hard water.

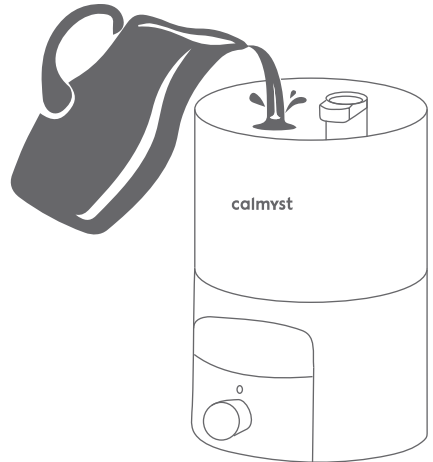

- 1 Remove the lid and water tank from the base of the humidifier.

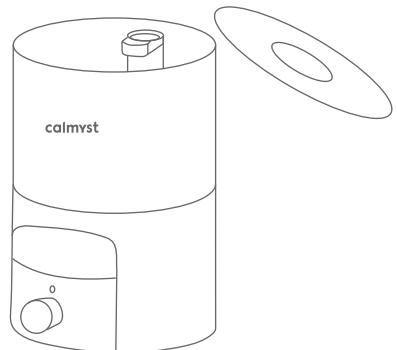

- 2 Optional: Remove the water tank from the base of the humidifier.

- 3 Pour water directly into the water tank. DO NOT pour water down the misting tube or directly in the base.

- 4 Place the lid back on the humidifier.

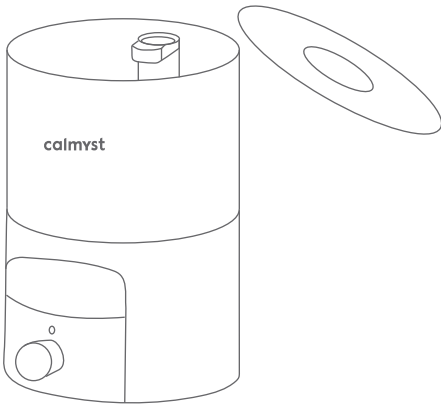

Adding Essential Oils.

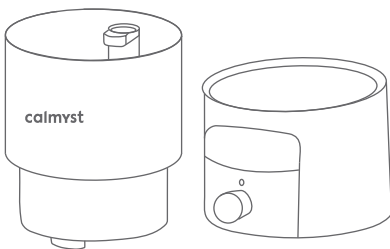

Always make sure the humidifier is unplugged and turned off when adding essential oils.

Never place essential oils directly in water unless the oils are water soluble.

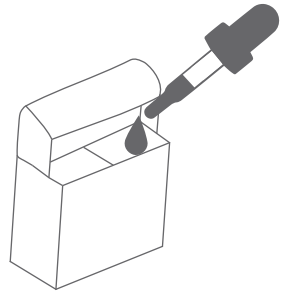

- 1 Remove the lid and water tank from the base of the humidifier.

- 2 Remove the water tank from the base of the humidifier.

- 3 Place essential oils in any of the holes in the essential oil drip tray.

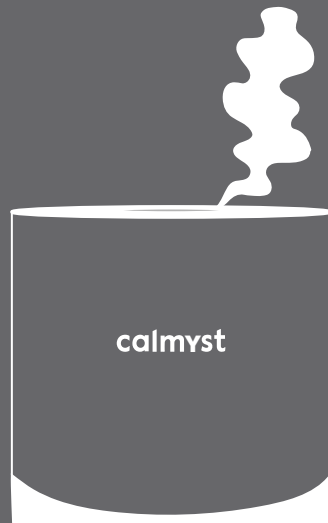

- 4 Place the water tank back on the base of the humidifier and the lid on the tank.

User Manual

Cleaning & Care

Cleaning.

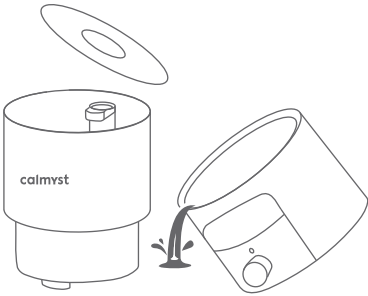

You should clean your humidifier every 3 days or prior to storing it.

Never immerse the base in water or liquid. Do not allow water to enter the essential oil tray.

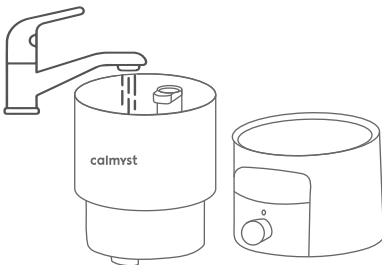

If water enters the drip tray or the air inlets on the bottom of the humidifier place the base in a ventilated place to dry prior to use.

If using dish soap, ensure the humidifier is fully rinsed and no soap remains.

- 1 Unplug the humidifier, remove the lid and empty any remaining water from the base or upper tank.

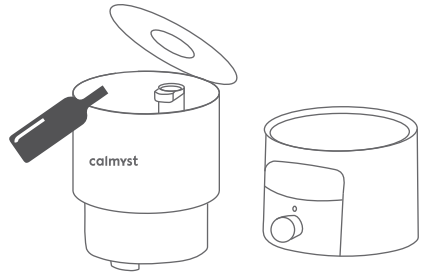

- 2 Rinse the upper tank, base, and lid with room temperature water. Ensure water does not enter the essential oil tray.

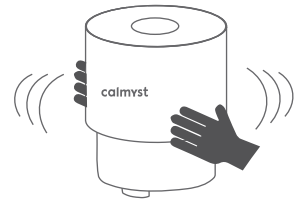

Descaling.

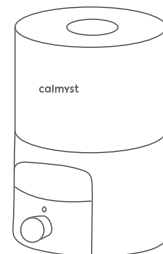

- 1 Fill the upper tank with 3 cups of distilled white vinegar and set the base to the side.

- 2 Place the lid on the upper tank and swish the vinegar around the tank.

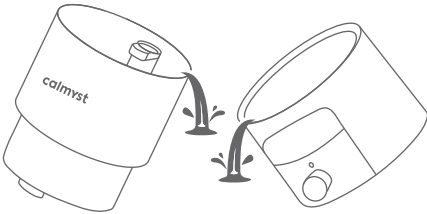

- 3 Place the upper tank back on the base and let it sit for 15 to 20 minutes. Some vinegar will drain into the base and loosen the mineral buildup, including on the float.

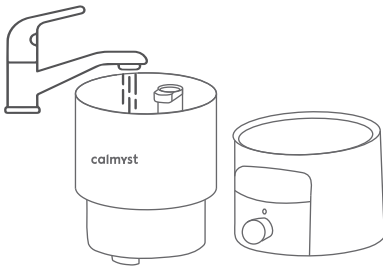

User Manual

Descaling Cont.

- 4** Empty the vinegar from the base and upper tank.

- 5** Rinse and gently scrub the humidifier using a cleaning brush or soft cloth to remove remaining scale or vinegar smell.

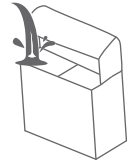

- 6** Reassemble the humidifier ensuring all pieces are placed correctly on the humidifier. Ensure the float is clipped in on both sides.

Warnings During Cleaning Process.

- 1** DO NOT allow water to enter the essential oil drip tray.

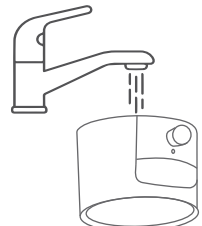

This also functions as the air outlet for the humidifier which is connected to the electrical components. Allowing water to enter the drip tray may cause issues such as leaking, inoperable humidifier, electrical issues, etc.

- 2** DO NOT shake the entire humidifier while the upper tank is set on the base. Water may enter the essential oil drip tray breaking the humidifier.

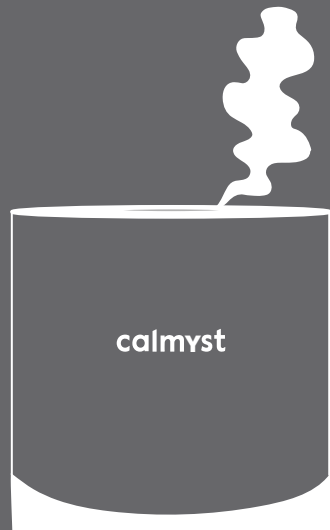

- 3** DO NOT rinse the bottom of the humidifier. If water enters the bottom of the humidifier or the essential oil tray place the base in a ventilated place to dry before use.

User Manual

Got Questions?

Cleaning and Maintenance

Clean the inside of the water tank and the base of the humidifier weekly to prevent mold, mildew, and mineral build up.

The lid, misting tube, water tank, and float are all dishwasher safe!

NOTE: Due to the electrical components present, the base is NOT dishwasher safe.

Always empty the water from the humidifier and rinse before refilling.

Pro Tip: Remove the water tank from the base first, then empty the remaining water; both from the water tank and base. Pouring out water when the water tank is still on the base will cause a mess!

Never pour chemicals into your humidifier. Only use food grade descaling tablets and dishwasher soap.

When Idle for an Extended Time

If the humidifier is idle for an extended period of time unplug the unit and dry the interior thoroughly.

Store the humidifier in a dry and ventilated space to prevent mold and bacterial build up.

Troubleshooting

Problem	Cause	Solution
My Humidifier is Leaking	Water is overflowing the base of the humidifier and going down the essential oil tray	<p>Ensure the black float in the base is clipped in and secured on BOTH sides</p> <p>Fully set the water tank in place on the base ensuring no gaps are present.</p> <p>Ensure the spring and plug on the bottom of the upper tank are not stuck and remove any foreign objects</p>
	The water outlet at the bottom of the upper container is not sealed.	Ensure the silicone plug at the bottom of the upper container is secure.
The humidifier is not turning on or shutting off prematurely	The air inlet on the bottom of the base is blocked.	Ensure the humidifier is not placed on carpet or surfaces that will block the inlet.
	One of the floats is stuck or out of place	Remove foreign objects and place the floats back in place.
	The water tank is not fully flush on the base, there are gaps.	Fully set the water tank in place on the base ensuring no gaps are present.
	The outlet does not have power.	Use a proper power source.
	Hard water has repeatedly been used, calcifying components such as the water float or atomization board.	Descale the humidifier and begin using filtered or distilled water. If detergent was used, deeply rinse to ensure none remains.
	The water tank is not filled up with water.	Add additional water to the water tank so the sensor will trigger.
There is white dust on my furniture or white build up on my humidifier	The packaging under the water tank was not removed.	Remove packaging from the base of the humidifier.
	Water that has not been sufficiently filtered has been used. Minerals from the hard water have been left behind.	Regularly clean your humidifier and use either distilled water or properly filtered water.
There is abnormal noise coming from my humidifier	One of the floats is stuck or out of place.	Remove foreign objects and place the floats back in place.
	The humidifier is not on a solid surface.	Place and operate the humidifier on a solid surface.

Calmyst humidifiers were designed to be completely free of trouble. However, if your issue persists please contact us at help@snlbrands.com. Our team of experts in Orange County, California will happily assist you.
